Abstract

This model article is intended to demonstrate the formatting and structural style used in the Journal of Sustainable Technology in Agriculture (JOSTA). It outlines the essential components of a research paper, including the abstract, keywords, introduction, methodology, results, and references. The content is illustrative and not based on actual research findings. Authors may use this template to ensure that their manuscripts adhere to the journal's formatting standards and present their work clearly and consistently.

Keywords: sample paper, sustainable agriculture, journal format, demonstration, JOSTA, R.

1. Introduction

The introduction is in principle “as usual”. However, it should usually embed both the implemented *methods* and the *software* into the respective relevant literature. For the latter both competing and complementary software should be discussed (within the same software environment and beyond), bringing out relative (dis)advantages. All software mentioned should be software should be properly cited [Mullahy \(1986\)](#).

[Chambers and Hastie \(1992\)](#) cited.

2. References

Chambers JM, Hastie TJ (eds.) (1992). *Statistical Models in S*. Chapman & Hall, London.

Mullahy J (1986). “Specification and Testing of Some Modified Count Data Models.” *Journal of Econometrics*, **33**(3), 341–365. [doi:10.1016/0304-4076\(86\)90002-3](https://doi.org/10.1016/0304-4076(86)90002-3).

Technical details

Appendices can be included after the bibliography (with a page break). Each section within the appendix should have a proper section title (rather than just *Appendix*). For more technical style details, please check out JSS's style FAQ at [<https://www.jstatsoft.org/pages/view/style#frequently-asked-questions>] which includes the following topics:

- Title vs. sentence case.
- Graphics formatting.
- Naming conventions.
- Turning JSS manuscripts into R package vignettes.
- Trouble shooting.
- Many other potentially helpful details...
